Replaced it with some 14awg sjew about a foot longer and a good three prong plug. Ill fix that! Grounded the replacement cord to the amp chassis. Not good. Not good at all. The speakers let out an awful squall and the amp let out its magic smoke. Anyhow, the protection light is lit on only two channels. I assume they are the ones affected. Heres a pic of the boards. The first pic is a good one on the outside of the amp, the next board is the toasty one.

What are the odds of fixing this amp by replacing only this or is it likely when the board is removed theres going to be more damage Best I could tell it says; RCD 135, 2R7ohm5%, H 96161. What is it and where do I find it. Why is there plastic tape under the output devices. Not much thermal grease under it either. Hard to tell from the pics, but in my experience it doesnt look too bad. Usually a toasted resistor is not readable and the board would show some evidence of heat. R47 is a 2.7 ohm 2W according to the schematic from this link. Do a quick test to see if its ok. Does there appear to be any points where the PCB might have been shorting to the chassis Best I could tell it says; RCD 135, 2R7ohm5%, H 96161. What is it and where do I find it. Not much thermal grease under it either. Wogg Music Published projects PPA100 Bass Guitar Amp, ISO ElCheapo Sub, Indy 8 2.1 powered sub, MicroSat, SuperNova Minimus Hard to tell from the pics, but in my experience it doesnt look too bad. Does there appear to be any points where the PCB might have been shorting to the chassis Doesnt it have to be removed to test Just any 2.7ohm 2W wirewound Not registered at hifiengine, mind sending that schematic in a pm. If you did cut it, then replace. Wogg Music Published projects PPA100 Bass Guitar Amp, ISO ElCheapo Sub, Indy 8 2.1 powered sub, MicroSat, SuperNova Minimus As far as looks go, q15 looks no different than the other transistors. Maybe its just the dust bunnies in the picture. The insides need a good cleaning. Pulling the thermal tape around reveals no cuts. Ill let you guys know how it goes. All the smoke started when I grounded the chassis and only the two channels that were hooked up went into protection. Why As far as looks go, q15 looks no different than the other transistors. All the smoke started when I grounded the chassis and only the two channels that were hooked up went into protection.

Why My guess is there was something shorted that should not have been and the speaker probably completed the circuit. How are your speakers BTW. Heres a link back to the Carver site when I replaced the boinked rca plugs. Again checked the rca plugs to be sure they were not grounded, all good there. Waited till the replacement resistors came in, then pulled the black one out. It checked good. Went ahead and replaced it with the new one anyway. Pulled the rest of the boards out and havent seen anything that looks like smoke came from it; nor did I smell anything burnt. Ill pull the heatsink from the board this weekend and look for any funny looking areas on the backside of the boards. Those suckers are the first things to go when an amp fails, in my experience its 99% of the time fabricated anecdotal statistics are the best!. Heres a page on how to test BJTs with a multimeter. You should be able to test them on the board OK, though the reverse resistance may not look open like it should, but it will be higher than forward. Chances are youll see a dead short from emitter to collector on one or more devices, indicating that sucker fried internally. Wogg Music Published projects PPA100 Bass Guitar Amp, ISO ElCheapo Sub, Indy 8 2.1 powered sub, MicroSat,

SuperNova Minimus. Create one here. Ill put it to you this way, he hooks up his highly acclaimed Carver Silver 7 tube It seems I fell into some luck as my AV 505 are one of the Jim Croft.FREE Phase Linear, Sunfire, Carver owner and service manuals. AV220. AV405, AV405 service, AV405 specifications. AV504x. AV505, AV505, AV505 23 Feb 2009 Manuals and free owners instruction pdf guides. Find the user manual and the help you need for the products you own at ManualsOnline.Creators are allowed to post content they produce to the platform, so long as they comply with our policies. United Kingdom. Company number 10637289. We usually ship same day and item reaches you within 2 weeks.

Usually it takes maximum 1 month to reach anywhere in world. I am offering up for sale 2 items, my Integra DTR 5.9 and Carver AV705x 5 channel amp. I would very much prefer this to be local and by local I am willing to drive up to 2 hours one way to make the transaction. The Integra was just serviced and has a brand new HDMI board. Its amp section hasnt been used in over 4 years as I have been using the Carver. It has never been abused, never been driven hard. It works just as good as it did when it was new. I have the original remote and manual. Its listed as 90 wpc x 7, its got 4 HDMI ports, upscaling, Zone 2, and preouts. No phono input but its got component, svideo, optical, coaxial and composite inputs. A link to the owners manual is here A better breakdown of the specs are here An Engadget review Here are a few pics of the Integra I have already. It literally still looks new. Stock photos are below It has THX knobs on the back that are used to adjust the gain if needed. Please note, some of these are not functional, as in they dont increase or decrease the gain. This does not affect the sound. In addition some of the RCAs are bent, but again it still functions with no issues. Some of the RCA grounds pulled free due to RCAs that were too tight, they have been reattached and again this amp is fully functional. Here are some pictures of the Carver Here are some pics of the THX knobs, I have been told its easy to fix them, I simply dont have the skills to solder the parts myself. Payment via PayPal as a gift or add 3% as I need to get 550 after any fees. I am not making any money here on this sale, these items are priced IMHO to move. I am happy to answer any of your questions, but this is a limited time deal. If I dont sell these items quickly the item I am looking to purchase will go away and then I will need to keep these items. So if you want them, move fast, there will be no price reductions on this.

Also note, I will not sell separate unless I have a buyer for both the Integra and Carver. I must sell both pieces to get the item I am looking to buy. Also I was wondering what brand of RCA cables are you using. They look pretty nice. Also I was wondering what brand of RCA cables are you using. They look pretty nice. LOL Good luck on the sale btw, the amp alone is worth it. I am hoping someone looking for HDMI 1.3 capabilities and a nice amp to resell or keep themselves will jump in. I will miss the Carver if it goes as it was my first dedicated amp and allowed me to jump to the LSis when the price was right on them. If this stuff doesnt sell, I will probably end up keeping the Carver forever, possibly get it worked on to iron out all the kinks, and use it for a home distributed audio setup since I can run a mess of speakers off it in either parallel or series. I may keep the Integra as well for a tertiary setup, or to use to distribute the audio since it has both main and zone 2 preouts To me awhile to sell the parasound and 2Bs without ship. I am sure it will sell for what you are asking I have a box for the Integra and can find one for the Carver although they are both somewhat heavy. Not willing to sell them individually without the other having a buyer lined up. If interested PM me for details. Also depends on if the item I am looking to purchase is still available as well. Someone drove 2 hours to get them. Now, I am subless. It takes a while to find someone local. It too me about 4.5 months to sell locally. Time to play the long game. If you want to get involved, click one of these buttons. For a better experience, please enable JavaScript in your browser before proceeding. It may not display this or other websites correctly. You should upgrade or use an alternative browser. I really like the SQ of the Sunfire products ans decided to try biamping my wide channels or side axis channels as they are called in my Sunfire manual.

First I was surprised by the size of this thing, about 50 pounds and the size of a carry on bag with wheels you take on a plane. I wanted to evaluate the SQ before dropping it into my main rig so I propped it up on a couple of chairs and connected it to my desktop system driving a pair of JBL 230 speakers. I was expecting the power of a sledge hammer and instead this amp was as delicate as a flower, almost tube like. Music just floated effortlessly from my speakers and when things became more dynamic no strain, no collapse just effortless rendering of the signal. All I can say is that I think that is why this amp presents music so effortlessly, it has a giant reserve to tap whenever it needs it. I am going to move this amp into my HT rig and now I feel I need to get a Carver 2 channel amp for my desktop I have been spoiled. Another nice thing about getting this amp is it has Made in USA stamped on it so no skimping on manufacturing costs. I highly recommend this amp. There are many fans of the Carver gear that share your observations of the gear they have or have had in their rigs throughout the years. I would like to correct you on this quoted statement above though, or at least shed some more light on the subject. Also, I know Bob pretty well and he is not a believer in high quality capacitors, resistors, wiring and the like. I'll put it to you this way, he hooks up his highly acclaimed Carver Silver 7 tube amps to power strips. Yes, I know that they used Monster wiring in some of the equipment but Bob to this day does not believe it made a difference. The BOD at Carver Corp. Perhaps you have heard of the Cherry 180s. At an audio event held before they came out to the public, some friends and audio enthusiasts got together and built prototypes of this amplifier high atop a mountainside in NC. Somewhere around 6870 of them total. Bob simply does not believe that upgraded parts make a difference in the end result.

or if they do, he isn't interested in adding them in during production in order to keep costs down. Many manufacturers share the same thought on keeping a reign on production costs. This was not a decision made by Bob himself, but after the board decided to oust Bob from making the final decisions at Carver Corp. These were to be the pinnacle of Bob's work. For the most part, the Lightstar gear sounded really, really good but production was limited to extremely limited on all of the Lightstar gear. For example, if my memory serves me correctly, there may only be less than 100 Lightstar amplifiers and somewhere around a hand full of preamplifiers. Tom Real sound is my reference and while perfection may not be attainable. I saw some info about the AV 505 I want to share. Check out this review of the 705 BTW, it must be interesting to hang out with the man himself. After the 505 goes in my HT rig I need to hunt down another Carver amp for my desktop. I am thinking of the 220, any suggestions. I will be picking up mine either down in Atlanta or at the same event we built the amps at a few years ago. All of the mods and upgrades have been completed and I can post a picture then. Also, I would like to correct myself. I misspoke about the tube amplifier. The amps I have waiting for me are the prototypes of the VTA20S Black Magic tube amplifier. Different tube types, in mono configuration on a glass base with all upgrades and mods including the internal wiring. When I pick it up, I'll be happy to snap a shot for ya. In the meantime, here's a shot of one heck of a fun stereo system we built in 09. Silver 7s, pair of Silver 9s I think only 3 were ever made, the rare Lightstar pre we were speaking about, prototype ribbon speakers never put into production along with some other audio goodies we played with for a couple of weeks up on the mountain. We will be headed back up in about a month. Good times! Real sound is my reference and while perfection may not be attainable.

There is enough power there to launch the space shuttle. So can you recommend a Carver 2 channel setup for my desktop please. BTW, if memory serves, I think that was about 2K watts of pure tube power. Really fun to play with and listen too. Tom Real sound is my reference and while perfection may not be attainable. If you do ever decide to go with separates, without getting into the rare or unobtainable Carver equipment. I would start to look at the M500ts. I have heard almost every amplifier Carver has ever built and all of the various mods as I reviewed them all and it is of my observations that the M500t has the sonic characteristics and headroom to do your speakers justice. The second runner up for you from me would be the Carver M4.0t. Either one would do your office

rig good. I will be there this year as well. Tom Real sound is my reference and while perfection may not be attainable. I am using a Sunfire TG3 for 2 channel and really like sonic holography. How do you think it compares to the Sunfire Classic Tube preamp for 2 channel. BTW, thanks for the invitation to the site and the event. Any chance you can do a google hangout with Bob while you are there It is 250 watts into 2 channels. I really liked the AV 500 in two channel, any opinion on the A500 Thanks Life keeps getting in the way. Ill answer your questions the best I can in the order given. Many people who have heard the gear agree. Parts and the scarcity of them is what prevented me from acquiring any of the Lightstar gear though. I think Rolland and perhaps James Sauter are the only two people in the world that have some of the most important parts needed for certain repairs and some parts are no longer available period. I didnt feel like paying that much for what may have amounted to a pretty doorstep one day. Also, the headroom on the Lightstar amplifier was not really what I expected it to be.

It was clean all of the way up but ran out of headroom rather quickly when pushed under really demanding loads. This obviously wasnt a problem with the Silver 7s and 9s. The Black Beauty is a much smaller amplifier in terms of power but Bob did it right. This amp is best suited for a lighter load, 4 ohms or higher. The sound is very pleasing, fluid and enjoyable with plenty of detail without congestion within instruments or vocals. I am talking about the stock Black Beautys and not the upgraded ones. The upgraded ones are a completely different animal as they use different tubes that utilize different voltages and double the output. If memory serves, both the upgraded and stock Black Beauties can be configured to run mono or stereo. When it comes to Sunfire gear, I really never paid it that much attention. The sonic signature that they offered were not really what I was looking for. You might want to hit up the boys over at the other two forums to see what their observations are with regards to Sunfire. With what little I did pay attention too with Sunfire, I do have some positive audible memories from the Sunfire Classic tube amp. I dont recall having any with the TG3 but I wouldnt hold that as set in stone and I would most definitely would take my observations with a grain of salt when it comes to Sunfire gear. Like I said, I never really paid them that much attention. We have tried in the past multiple times to coordinate and offer a live feed from Carverfest but the internet is spotty and even though Tim one of the owners of the Watershed Cabins has made many upgrades to the internet, it has just become way too much trouble than its worth. What we have done in the past to get around this was to have folks offer any questions they would like to ask Bob prior to hosting the event. Then we video tape the questions and answers and post them online.

Even though I started the event, I have not attended the past two years so I dont know what the plans are for this years fest. The boys over at both forums would know more as I passed the torch to them a couple of years back. Sorry, but its not like we hold the event in the middle of a major metropolitan city. its literally out in the vast boontillies of the mountains of NC, very close to the Tenn. Ill put it to you this way, we are lucky to have a grocery store 7 miles away. Regarding the AV500, once again, Im a 2 channel guy. never paid any attention to the AV stuff. The only one I ever had in rotation was the CT17 way back when I had a TV hooked up to the rig when it was in my office. Those days are long gone. Congrats on the new toy. New toys are always fun! Tom Real sound is my reference and while perfection may not be attainable. Sounds like a great time Tell Kim I have bacon ray ring me for couch space or get a cabin. Not for the entire time but I will be coming up on most likely a Thursday and staying until Sunday. Subject to change depending on business. We will be down in WS1, the Daniels old cabin. Kimmie and the little one are planning on making it this year as well, most likely just for the weekend. Can you believe hes 7 years old now. Time flies my man. Tom Real sound is my reference and while perfection may not be attainable. Open to offers. Great amp, just hums in my system. Most of the preamps that I have heard vary little until you move up to the Lightstar, Sunfire, or Cseries the likes of the C16 or C19. Welcome to the WBF Sassassin. Most of the Carver gear is found on Craigslist or EBay. Carver Corp. has been out of business for a while

now. Tom Real sound is my reference and while perfection may not be attainable. Good luck! This should help you in your journey. Happy hunting!!! Tom Real sound is my reference and while perfection may not be attainable.

A place where audiophiles and audio companies discuss existing and new audio products, music servers, music streamers and computer audio, digital to audio converters, turntables, phono stages, cartridges, reel to reel, speakers, headphones, tube amplifiers and solid state amplification. Founded in 2010 Whats Best Forum invites intelligent and courteous people of all interests and backgrounds to describe and discuss the best of everything.
